**DETAILED ACTION**

***Election/Restrictions***

Applicant's election without traverse of group I in the reply filed on 06/09/05 is acknowledged.

Furthermore, additional restriction is also deemed necessary.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a ferromagnetic memory cell, classified in class 257, subclass 297.
- II. Claims 15-20, drawn to an integrated circuit, classified in class 257, subclass 297.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it is not required that the integrated circuit contain a ferromagnetic core with a crystallization in the (001) family. The subcombination has separate utility such as a device in which a via does not have an area greater than or equal to the area of the ferromagnetic core.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
